

Password Reset Guide

Overview

This guide explains how users can reset their account password, recover access, and troubleshoot password reset problems.

When to Use Password Reset

Password reset should be used when:

- The user forgot their password
- The user cannot log in
- The user suspects password compromise
- The user receives an invalid password message
- The account owner wants to update credentials

Password Reset Steps

1. Open the login page.
2. Click "Forgot Password".
3. Enter the registered email address.
4. Click "Send Reset Link".
5. Open the password reset email.
6. Click the secure reset link.
7. Create a new password.
8. Return to the login page and sign in again.

Password Requirements

The new password must:

- Be at least 12 characters long
- Include uppercase and lowercase letters
- Include at least one number

- Include at least one special character
- Not match the previous password
- Not contain the user's email address

Reset Link Expiry

Password reset links expire after a limited time for security reasons. If the link expires, the user must request a new password reset email.

Reset Email Not Received

If the password reset email is not received:

1. Check spam or junk folder.
2. Confirm the registered email address is correct.
3. Wait 5–10 minutes.
4. Search inbox for the product name.
5. Ask the workspace admin to confirm that the user account exists.
6. Request a new reset link.

Invalid Reset Link

A reset link may be invalid if:

- It has expired
- It has already been used
- The user requested a newer reset link
- The email was forwarded or modified
- The account was disabled

Resolution steps:

1. Ask the user to request a fresh reset link.
2. Use the latest email only.
3. Complete password reset in the same browser.
4. Clear browser cache if the reset page fails.

Account Locked

An account may be temporarily locked after repeated failed login attempts. The user should wait for the lock period to expire or contact support if the access issue is urgent.

Security Recommendation

After resetting the password, users should:

- Sign out from all devices
- Enable two-factor authentication
- Review active sessions
- Revoke unknown sessions
- Avoid reusing old passwords

Escalation Conditions

Escalate to human support if:

- The user cannot access the registered email
- The account owner is unavailable
- Two-factor authentication recovery is also required
- The user reports suspicious activity
- Admin ownership transfer is needed
- The reset email is not delivered after multiple attempts
